Applications & Benefits

Applications

- Daylighting and pothole liquids from Vacuum trucks and portable Vacuum units.
- HDD liquids / semi-solids e.g. drilling fluid, semi-solids from shaker beds.
- Pond sludge and dredging solids.
- Construction site maintenance and cleanup liquids.
- Liquids received at dump sites or dump depots.
- Industrial waste fluid, sludge, semi-solids.
- Most jobs requiring a granular or powder type material to be blended with a slurry / semi solid material to achieve a homogenized mixture for solidification or other recommended purpose.

Benefits

- Single person operation
- Easy set-up & tear down of unit
- Small footprint and power requirements.
- No prescreening or fluid / sludge prep.
- Handles liquid to semi-solid material.
- Can handle most trash and debris without incident.
- Flailing action makes material homogenous
- Superior mixing reduces cost of solidification material used.
- Can blend various remediation materials into the output.
- No need for liquids to leave construction job site.
- Avoids high liquids dump fees.
- Enables better vacuum truck utilization, no need to leave the job site or travel into congested traffic for hours to dump liquids.
